

1. Temperature Sensor TMP-2210 — Specifications

Parameter	Value	Unit	Notes
Measurement range	-40 to +200	°C	Continuous; see note 1
Accuracy (IEC 60584)	±1.5 (class 2)	°C	At 20°C reference
Response time (t90)	< 3	s	In still air
Output signal	4–20	mA	Linear to range
Max intermittent	220	°C	< 10 min; not for control

Note 1 — Maximum Operating Temperature: The rated maximum for continuous operation is **200°C**. Exposure above this value accelerates thermocouple ageing and may cause drift of up to ±5°C within 500 hours. For applications requiring sustained operation above 200°C, ThermoSense recommends the Series 2400 (Pt100 RTD, rated to 250°C continuous).

2. Humidity Sensor HUM-2250 — Specifications

Parameter	Value	Unit
Measurement range	0 to 100	%RH
Accuracy	±2.0	%RH
Operating temp	-20 to +60	°C
Response time	< 8	s
